TITLE : CAMERA

ABSTRACT : PURPOSE: To facilitate control and to make quick picture displaying possible without specially preparing any separate program even when OS is different by recording the picture conversion and display program which is executable by means of another device OS in a recording medium along with picture data at the time of executing utilization in another device on a reception side where OS is different.

CONSTITUTION: ROM is prepared as an external memory 25 and the conversion and display program, etc., which is proper in the reception side device corresponding to the respective kinds of control system OSs is previously stored. The conversion and display program which is selected and read from the external memory 25 is recorded in a memory card 11 along with the picture through a card interface 10. In a personal computer on the reception side, data received together with the conversion and display program is stored in a main RAM. Then, picture data processed in accordance with the conversion and display program which is read from the main RAM is stored in VRAM and, then, it is read out and becomes a monitor output through a video interface.
